

Lares Research Introduces **New Xtreme-Power™ (XP) Highspeed Handpieces**

CHICO, CA, USA – Northern California-based manufacturer Lares Research has officially introduced its new **EXTREME-POWER™ (XP)** line of highspeed handpieces. Engineered and manufactured in the USA¹, the XP series delivers world-leading power, generating 42 Watts² in the standard head size and 38 Watts² in the mini head size (for swivel models compatible with KaVo MULTIflex³ couplers).

Delivering a 170% increase in power compared to previous Lares models, XP highsPEEDs significantly shorten cutting time for demanding procedures like crown preparations and zirconia removal. By significantly boosting clinical efficiency, the XP line allows dentists to see more patients daily without extending work hours and elevates the patient's experience through faster, more comfortable care.

Lares XP highsPEEDs are available in handle styles, weights, and head sizes to fit every preference. XP highsPEEDs let dentists choose the warranty coverage that fits their practice budget and style with choice of 1 year, 3 years or 5 years.

Lares XP highsPEEDs are available now, sold factory-direct for maximum value.

Doctors can order online at www.laresdental.com or by calling toll free: **1-888-333-8440, ext. 1**

Choice of mini (38 Watts)
or standard (42 Watts) head size

¹Lares XP highsPEEDs are manufactured at our Northern California factory. A few of the components are sourced from exceptional global suppliers.
²Lares XP power as per ISO test specification. Visit www.laresdental.com for test details. ³Kavo and MULTIflex are trademarks of Kavo Dental GmbH.
